} Markdown Structure?

Creating the Topic:

folder/~/project/logsuch \$ logsuch [options]

OPTIONS:

- No args: Try to find the ^{latest} logsuch file or project inside the current folder. If none, create a new.
- -list/-l: prints a list of Subjects/Topics that this project contains and its last ^{edit} date.
- <Sub.name>: opens in an editor the previous content, if any, of that subject.
- -rm old/-rm <Sub.name>: deletes all content of that subject. It must ask for permission.
- -make: It creates the .tex file with all data imported in it and calls for latex/pdf compilation.

#-----

The file contents here.

★ → As future implementation: create a way to read the contents of a Markdown and import it properly to the .tex structure.

See ways to import images inside the markdown (if the .and standard does not support it)
